DECON
SERVICES**
DECONTAMINATE ■ DISINFECT ■ CLEAN

Decontamination is required anytime gear is heavily exposed to products of combustion or other harmful contaminants. Gross decontamination should be done prior to removing contaminated firefighting ensembles. SCBA's should also be worn through the fireground gross decontamination process and be the last item removed and cleaned.

Emergency DECON Services has compiled some of the industry's best products in the Firefighter Tactical Decon Kit to help protect our protectors.

Firefighter Tactical DECON Kit Components
